1) Each statement need a way to

Handwritten recognition needs image acquisition

These system used for classification and recognition of handwriting

So they can

The network was trained with a large no.of standardized picture

System can automatically recognized handwriting

2) Each statement need a way to

Systems that can automatically recognized handwritten digits

Handwritten recognition plays an important role in data statics

So they can

It provides high speed and accuracy

Reduces the number of connection weights

3)Each statement need a way to

Give atmost accuracy in recognition

Simplest form of output

So they can

Introduce more number of datasets

Implement efficient form of output
